FLY Cure WB

Water-based concrete curing compound

Description

FLY Cure WB is a curing compound used to spray onto the surface of fresh concrete to provide an effective method of curing.

It forms a flexible film on the surface of freshly placed concrete

Offering

- Reduces surface shrinkage and cracking.
- Ease to Apply.
- Enables concrete to hydrate effectively.
- No waiting - apply as soon as possible after placing concrete.

Comply with: ASTM C 309

Directions of use

Fly Cure WB is spray-applied to the surface of the newly placed concrete. Care should be taken to ensure a complete covering.

Fly Cure WB should be applied as soon as possible after the concrete has been surface finished, but generally within 30 - 45 minutes, depending on weather conditions

If the weather conditions are very hot, +40° C, please request a white pigmented product

Technical data

Color: Milky white

Density: 1.02 kg/L

Rate of use: 6 -8 m² /L (depending on surface conditions)

Drying time is dry to the touch within 2 hours

Moisture loss limit: 0.55 Kg/m² in 72 hours, 40°C

Packaging & Shelf lifetime

Fly Cure WB is supplied in a 5 -16 -200 Liter drum.

12 months from production date if stored in original, unopened packaging at temperatures between +5°C and +35°C. Protect from direct sunlight and frost

The product is flammable, so please do not expose it to naked flames or other sources of fire
